

# WHAT ARE “FENTAPILLS”?

## There are Two Types of Fentanyl

### Pharmaceutical Fentanyl:

Prescribed and acquired through a licensed medical professional or pharmacy.

### Illegally Manufactured Fentanyl (IMF):

Produced and circulated through illicit drug markets with no quality control.

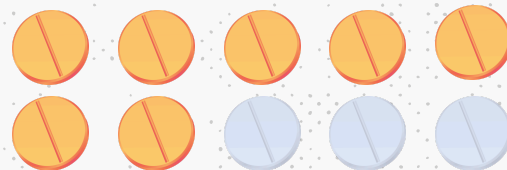

### Get the Facts:

- You cannot see, taste, or smell fentanyl.
- The DEA has seized a record 86 million fentanyl pills to date in 2023.
- One pill, or even half of a single pill, could be lethal; it only takes a dose the size of 2 grains of salt to kill.
- People often do not know that Fentanyl has been added to their drugs.
- The only safe medications come from licensed and accredited medical professionals.
